

What is claimed is:

1. A surface protective film for transparent conductive substrates protecting a surface opposite to a side of a conductive thin film of the transparent conductive substrates or a surface on a side of the conductive thin film, wherein an adhesive layer is formed on one side of a base material film, and an antistatic layer is formed on the other side.

2. The surface protective film for transparent conductive substrates according to claim 1, wherein said base material film is a film including polyethylene terephthalates and/or polyethylene naphthalates.

3. A transparent conductive substrate with a surface protective film comprising a conductive thin film on one side of a substrate and a hard coat layer or an anti-glare layer on the other side, and simultaneously comprising an adhesive layer of the surface protective film for the transparent conductive substrates according to claim 1 or 2 attached on a surface of the hard coat layer or the anti-glare layer, or on a surface on a side of the conductive thin film.

4. A transparent conductive substrate with a surface protective film comprising a conductive thin film on one side of a substrate, and simultaneously an adhesive layer of the surface protective film for a transparent conductive substrates according to claim 1 or 2 attached on a surface on the other side of the substrate or on a surface on a side of the conductive thin film.
